

### Advancing Mobility

The Diplomat™ solution from DCS is an integrated set of technologies designed to deliver instant access to information and maximum control of mobile assets. With an eye on the future and a commitment to today's business needs, DCS offers a growing suite of Diplomat wireless vehicle tracking, personal tracking and fleet management solutions.

Whether you have two mobile workers or two hundred, information is critical to your business. Diplomat delivers the information you need through a suite of Web-based tools that interpret and display data uploaded from your Diplomat-equipped vehicles and GPS-enabled handsets. The **Diplomat Web site** is easy to use and offers full-color, highly detailed map views as well as custom-configurable reports. No special computer hardware or software is needed; with an Internet-ready computer, the power of Diplomat's Web software is at your fingertips.

### Window with a View — Mapping Software

Maps are the heart of the Diplomat solution. They are custom windows through which you will see the position and path of travel for one or all of your mobile assets. They offer simple navigation and custom-configurable options that let you control content and appearance. Diplomat maps, enable authorized users to:

- View the present position of one or more vehicles (GPS event data is transmitted at least every 15 minutes).
- Replay a vehicle's path for any day and any time period.
- Define priority locations and view the relationship of vehicles to Customer Sites and Landmark Sites.
- Zoom in/out nine levels from street details to regional views.
- Locate a street address, view other areas, move map in any direction and recenter on any point.

### News You Can Use — Reporting Software

Diplomat offers over 20 management reports. Each report is a custom-configurable form that is essentially a search engine that sorts, selects and presents the information you choose. Diplomat delivers the information you need when you need it and also sends automatic notifications to keep you informed. Using Diplomat Reports authorized users can:

- View, print and download daily vehicle events including trip miles logged, customer site or landmark site stops, speed, sensor data and more.
- Create mobile device activity logs for single mobile devices or all Diplomat-equipped vehicles.
- Search for specific stops or events.
- Archive Diplomat data. All reports can be printed and/or saved electronically for analysis and e-mail distribution.

### There's more...

The Web is a powerful tool and Diplomat is a complete system. DCS offers extended capabilities through Web services. How will Web services deliver more for you? See reverse for information on **Diplomat Web Services**.

## Web Services

### The Diplomat Difference

*The Diplomat™ solution is an integrated set of technologies that deliver instant, easy access to critical tracking information. Ideal for any business with a mobile workforce, Diplomat offers dependable, affordable technology, superior customer service and unmatched data warehousing capabilities. Choices, flexibility and service set DCS ahead of the rest. That's the Diplomat difference.*

Technical advances are creating opportunities for fleet operators to reduce costs, expand services and improve their bottom line. To fully leverage the benefits of available technologies, however, information must be accessible and usable. DCS recognizes this and enables full data access and data migration to other enterprise software systems through **Diplomat Web Services**.

### A Bigger Toolbox

Data is a powerful business tool. It delivers the means to analyze activity, trends and results, which enables continuous improvement. Diplomat Web services lets you take that further; giving you more options and greater flexibility.

Diplomat Web services delivers cross-platform capabilities using Extensible Markup Language (XML), a universal language that allows applications to share data regardless of platform, operating system or programming language. This allows you to readily access your data and adapt it for sharing and integrating with other applications and software systems, which will:

- Extend the value of raw data.
- Streamline data entry and reduce associated costs.
- Reduce opportunity for error.
- Unleash the power of software and maximize IT investment.
- Create virtually unlimited reporting and analysis options.
- Improve overall efficiency and generate business opportunities.

### Diplomat Web Services Advantages

Technology has revolutionized business and will continue to shape the competitive landscape. The importance of information is clear, and expanding its value is critical. Web services allow applications to share data with ease, making your Diplomat report data more visible and more valuable.

- Operations Management Advantages:
  - Data ownership delivers extended capabilities for end-to-end solutions
  - Enhanced strategic planning
  - Improved decision-making
  - Improved cost efficiencies
  - Increased productivity
- Time Management Advantages:
  - Single-point data entry
  - Reduced paperwork/reduced error
  - Enables access from variety of devices
- Customer Service Advantages:
  - Improved record accuracy
  - Enhanced Customer Relationship Management
